

Pasture-Raised Eggs are One of the Richest Sources of Bioactive Nutrients

By: Dr. David Jockers, Natural News

Eggs are among the most nutritious foods on the planet. A whole egg contains all the nutrients required to turn a single cell into a baby chicken. Pasture-raised eggs are one of the richest sources of bioactive nutrients that enhance hormone function, reduce inflammation, improve fat-burning, and enhance brain function.

Chickens are designed to naturally graze on grass, weeds, worms, and insects. When they are able to do this they bioaccumulate omega-3 fatty acids, carotenoid anti-oxidants, and major minerals like magnesium.

It is a great idea to consume pasture-raised, organic eggs. Unless you have an immune sensitivity to them (lab test) or feel tired, have to clear your throat, feel inflamed, etc. than you want to have these as a staple item in your diet.

Eggs are a dense source of bioactive compounds

Eggs provide nutrients that help to prevent human health degeneration. One study released in 2005 provided that eggs contain 18 vitamins and minerals, some of which are commonly deficient in the western diet. Carrots seem to get all the credit for its carotenoid content but this pigment also gives yolk its yellow/orange color.

Carotenoids have antioxidant and anti-inflammatory properties that play a role in the central nervous system and are responsible for eye and vision wellness. Carotenoids are required for vitamin A production, assist in neural retina function, and provide protective macular pigment (responsible for field of vision in the center of the eye). Lack of this key nutrient is linked to macular degeneration and cataract formation. A study published by the Journal of Alzheimers Disease released in 2014 that a link exists in carotenoid intake and cognitive function observed by Alzheimer's patients (1-4)

Lutein and zeaxanthin

Lutein and zeaxanthin are two types of carotenoids that are essential dietary components because the body's tissue does not synthesize these compounds on its own. Aside from being found in the yolk of eggs, lutein and zeaxanthin naturally occur in dark leafy greens.

Providing more reason to not limit egg consumption to egg whites, egg yolk is a source of lecithin, choline, and phosphatidylcholine. Lecithin provides cellular support and aids in the secretion of bile which inhibits the buildup of stones in the bladder. Among metabolism promoting factors, choline is of essential importance in brain development.

Limited in a mother's ability to consume naturally sourced choline in foods, the choline content alone in egg yolks is one reason why pregnant women supplement their diet with eggs. Phosphatidylcholine is a protein that chelates iron ions, or in other words behaves as an antioxidant in the removal of metals, and assists in detoxifying the body. Specifically, phosphatidylcholine aids in inhibiting excessive melanin synthesis in skin. (3, 5)

Eggs are a nutritive powerhouse

It is well established that eggs provide a valuable source of protein, especially for individuals with gout because it does not contain purine (3). One entire large egg contains 6 grams of high quality protein and is a good source of protein for vegetarians (6).

Mostly found in the yolk, biotin is a B-complex vitamin that contributes to metabolic pathways by serving as a transport mechanism for vitamins and minerals into eggs during development and makes eggs an excellent source of this nutrient. Also responsible for the vitamin and mineral transportation, riboflavin and iron are two other nutrients found in trace amounts in both egg white and egg yolk. (7)

About the author:

Dr David Jockers is a Maximized Living doctor and owns and operates Exodus Health Center in Kennesaw, Georgia where he specializes in functional nutrition, functional medicine and corrective chiropractic care to get to the underlying cause of major health problems.

His website features great articles on natural health and incredible recipes. He is the author of the best-selling book *SuperCharge Your Brain* - the complete guide to radically improve your mood, memory and mindset. He has over 50,000 active followers on his social media and email newsletter and is a big influencer in the Primal Health movement.

Dr. Jockers is also available for long distance consultations and health coaching to help you beat disease and reach your health goals. For more information got to www.drjockers.com
