

Many Vaccines Contain Polysorbate 80 which Can Cause Anaphylactic Shock

By *Brigid Shaw, Natural News*

Add anaphylactic shock to the long list of disastrous effects of vaccinations. A recent article in [Vactruth.com](http://vactruth.com) identifies the potentially fatal allergic reaction as one of the consequences of polysorbate 80, a chemical found in many vaccines, including the flu and HPV vaccines (<http://vactruth.com/2011/05/18/is-there-a-hi...>).

German researchers have identified polysorbate 80 as the cause of an anaphylactic reaction in a patient. [Pubmed.gov](http://pubmed.gov) cited the study, which concluded that "polysorbate 80 is a solubilizing agent that can cause severe nonimmunologic anaphylactoid reactions" (<http://www.ncbi.nlm.nih.gov/pubmed/16400901>). In other words, this agent can suppress your immune system and cause a severe allergic reaction, which could kill you.

Found in creams, soaps and multiple medical preparations including vaccines, vitamin oils, and anticancer agents, in addition to common foods like ice cream, polysorbate 80 has been linked to much more than severe allergic reactions.

As far back as 1993, scientists were aware that polysorbate 80 causes infertility in mammals. Baby female rats were injected with the substance and experienced accelerated maturation, hormonal changes, decreased weight of the uterus and ovaries, and degenerative follicles (<http://www.ncbi.nlm.nih.gov/pubmed/8473002?d...>).

Catherine J. Frompovich, the author of the [Vactruth.com](http://vactruth.com) article, informs us that the University of Georgia is developing a vaccine that deliberately damages fertility as a method of contraception. It contains, of course, polysorbate 80. In fact, the chemical is a "preferred" ingredient. Little wonder, considering the damage it does to the female reproductive system. So shouldn't the Food and Drug Administration remove polysorbate 80 from vaccines, shampoos, and food products?

Polysorbate 80 is only one of a plethora of toxic ingredients found in vaccines. Thimerosal is a widely-used vaccine preservative made with mercury, a known neurotoxin. A multi-dose flu shot contains mercury levels 250 times higher than legally classified hazardous waste (http://www.naturalnews.com/024624_flu_the_sh...).

Adjuvants (added to vaccines to stimulate the immune system's response) used in vaccines are

derived from aluminum, a poison that can cause bone, bone marrow and brain degeneration. Formaldehyde (embalming fluid) is a documented carcinogen. To make matters worse, the destruction caused by the combination of these poisonous ingredients is magnified when they are used together.

According to the International Medical Council on Vaccination, diseases that have documented associations with vaccines include autism, cancer, Sudden Infant Death Syndrome, and many neurological and autoimmune diseases, to name a few.

Though publicly denied by governmental health "authorities," the evidence is mounting that vaccinated children suffer a significant decline in health compared to unvaccinated children. The International Medical Council on Vaccination cites a study of 17,674 children. Those vaccinated had 120% more asthma, 146% more autism, and 317% more ADHD than their unvaccinated counterparts.

With such toxic ingredients like polysorbate 80, is it any wonder that researchers are finding links between vaccinations and skyrocketing disease rates? Furthermore, perhaps the infertility rates that increase every year in this country are caused by an ingredient known to damage reproductive organs--one that is found in vaccinations and common household products.

To protect your family's health, inform yourself about the dangers of vaccinations. In the U.S., you have the right to refuse vaccines. Learn more at <http://exemptmychild.com/10752>.
